PROJECT REPORT

e-Medicine
Serve People Serve World

Submitted By

Name:- Kaushal Kishor Sharma
Roll No:- 18BS5822688
Reg. No:- NPU/31481/17

In partial fulfillment of requirements of III Year,
Bachelor of Science (Computer Application) (2020)

Under the Project Guidance of
Ekram sir

(Computer Application)

COMPUTER APPLICATION DEPARTMENT

G.L.A COLLEGE ,MEDININAGAR
NILAMBER-PITAMBER UNIVERSITY
MEDININAGAR, PALAMU-822101
JHARKHAND

ACKNOWLEDGMENT

Success of my project depends on largely on self and encouragement and guidance of many others. I take this opportunity to express my gratitude to the people who have been instrumental in the successful completion of this project.

First of all I would like to thank the management of ***BRIZTECH INFOSYSTEM ,Ranchi*** *for giving me the opportunity to do my internship tanning in their esteemed organization.*

I express my sincere thanks to ***Mr. NAGENDER KUMAR*** *Asst.Manager (System) for providing practical explosure for the project and his valuable guidance throughout the project work.*

I would also like to thanks my institution and faculty member who supported me in carrying out my project operation successfully, and providing me with vital information regarding my project objectives.

NAME : - KAUSHAL KISHOR SHARMA
ROLL NO : - 18BS5822688
REG. NO : - NPU/31481/17
INSTITUTION : - G.L.A.COLLEGE, DALTONGANJ
SESSION : - 2017-20

CERTIFICATE OF ORIGINALITY

This is to certify that the project report entitled **"e-Medicine"** submitted to Department of Computer Application, G.L.A College, Daltonganj in partial fulfillment for the award of the degree of BACHELOR OF COMPUTER APPLICATION (B.C.A), is an original work carried out by **KAUSHAL KISHOR SHARMA, Roll No. – 18BS5822688, Session – 2017-20** with his full and keen interest in the allotted project work and completed his work successfully under the guidance of EKRAM SIR.

The matter embodied in this project is a genuine work done by the student and has not been submitted whether to this university or to any other university/institute for the fulfillment of the requirement of any course.

Thanking You

INTRODUCTION

"Online Medicine Store" Site is a tool which is used in the automation of Medicine Selection and Purchase in an Online. In this tool, the medicine will be automated, Searched and Purchased by the customers dynamically and the reports on the same.

The proposed system of Online Medicine Store Site is fully an automated one. In the proposed Shopping Site, the customer in online can view the Medicine and requirements put forward by them. Online Medicine purchase is also possible with this system. As the proposed system is a centralized one, redundancy can be avoided; moreover the coordination of different departments becomes much easier.

The online interaction between Customers and administrator is also possible. The administrator is the one who is adding all the medicine details either through online or in direct for editing medicine day by day manner. The present era is technically far advanced. With the rapid growth in technology, the life style of a human being is changing on a very high pace. This advanced technology provides an average human being with opportunity of leading a comfortable life.

The E medicine system enables vendors to set up online shops for medicine, and also helps customers to buy medicine online , and a system administrator to approve and reject requests for new medicial store and maintain lists of store categories.Also on the agenda is designing an E-medicial site to manage the items in the shop and also help customers purchase them online without having to visit the medicine store physically.Our online E medical store will use the internet as the sole method for selling medicine to its consumers. Buying will be highly personalized and the items will provides at lower prices than most competitors.

OBJECTIVE

This is a project for Online Medicine Store or E-medicine. The basic idea is that customer's can buy medicine online. It consists of item details, status and delivery. The administrator can enter the name and password and generate the report and can perform operations like add, search, delete the products in the database.

E-medicine is a unique health portal for medicine and health care product.it is an attempt to make live easier by providing

Multiple options medicines from the comfort of our homes and offices too.
Through this portal we can online buy medicines,child care,nutritional suppliments,health monitors,orthopadetic products,elder care and beauty and personal care.

The present era is technically far advanced. With the rapid growth in technology, the life style of a human being is changing on a very high pace. This advanced technology provides an average human being with opportunity of leading a comfortable life.

The E medicine system enables vendors to set up online shops for medicine, and also helps customers to buy medicine online , and a system administrator to approve and reject requests for new medicial store and maintain lists of store categories.Also on the agenda is designing an E-medicial site to manage the items in the shop and also help customers purchase them online without having to visit the medicine store physically.Our online E medical store will use the internet as the sole method for selling medicine to its consumers. Buying will be highly personalized and the items will provides at lower prices than most competitors.

DATA FLOW DIAGRAM

A data flow diagram (DFD) is a graphical representation of the "flow" of data through an information system. DFDs can be used for the visualization of data processing (structured design). On a DFD, data items flow from an external data source or an internal data store to an internal data store or an external data sink, via an internal process.

A DFD provides no information about the timing or ordering of processes, or about processes will operate in sequence or in parallel. It is therefore quite different from a flowchart, which shows the flow of control through an algorithm, allowing a reader to determine what operations will be performed, in what order, and under what circumstances, but not what kinds of data will be input to and output from the system, nor where the data will come from and go to, nor where the data will be stored.

TOOLS /PLATFORM APPLICATION USED

2.1. Hardware Configurations:

Processor	: Pentium 4, higher version
RAM	: 512 MB
Hard Disk	: 40 GB space

2.2.Software Configurations:

Operating System	: windows 2000, xp ,vista , windows7
Web Server	: Xamp
Technology	: PHP
Backend	: mysql
Scripting language	: php
Web Design	: HTML, HTML5, CSS

ABOUT THE TECHNOLOG

PHP is a server-side scripting language designed for web development but also used as a general-purpose programming language. PHP is now installed on more than 244 million websites and 2.1 million web servers. Originally created by Rasmus Lerdorf in 1995, the reference implementation of PHP is now produced by The PHP Group. While PHP originally stood for *Personal Home Page*, it now stands for *PHP: Hypertext Preprocessor*, a recursive acronym.

PHP code is interpreted by a web server with a PHP processor module, which generates the resulting web page: PHP commands can be embedded directly into an HTML source document rather than calling an external file to process data. It has also evolved to include a command-line interfacecapability and can be used in standalone graphical applications.

PHP is free software released under the PHP License, which is incompatible with the GNU General Public License (GPL) due to restrictions on the usage of the term *PHP*. PHP can be deployed on most web servers and also as a standalone shell on almost every operating system and platform, free of charge PHP development began in 1994 when the developer Rasmus Lerdorf wrote a series of Common Gateway Interface (CGI) Perl scripts, which he used to maintain his personal homepage. The tools performed tasks such as displaying his résumé and recording his web traffic.

FRONT END LANGUAGES USED

Hyper Text Markup Language (HTML):-

HTML, or Hyper Text Markup Language, has two essential features hypertext and universality. Hypertext means you can create a link in a Web page that leads the visitor to any other Web page or to practically anything else on the Internet. It means that the information on the Web can be accessed from many different directions. Tim Berners-Lee, the creator of the Web, wanted it to work more like a person's brain and less like a static source of data, such as a book.

Universality means that because HTML documents are saved as Text Only files, virtually any computer can read a Web page. It doesn't matter if your visitors have Macintosh or Windows machines, or whether they're on a Unix box or even a handheld device like a Palm. The Web is open to all.

Hyper Text Markup Language (HTML 5):-

Html5 was developed to solve compatibility problem that effect the current standard HTML-4 one of the biggest differences between html5 and previous version is that older version require properitary plugins and API's (This is why a web page that was built and tested in one browser may not load correctly in another browser).HTML5 provides one comman interface to make loading elements easier .

One of the design goals for HTML5 to support multimedia on mobile devices . New syntactic features were introduced to support such as video ,audio, and canvas tags.

Cascading Style Sheet (CSS):-

Cascading Style Sheets (CSS) are a powerful way to affect the presentation of a document or a collection of documents. Obviously, CSS is basically useless without a document of some sort, since it would have no content to present. Of course, the definition of "document" is extremely broad. For example, Mozilla and related browsers use CSS to affect the presentation of the browser chrome itself. Still, without the content of the chrome buttons, address inputs, dialog boxes, windows, and so on there would be no need for CSS (or any other presentational information).

It is possible to completely change the way elements are presented by a user agent. This can be executed at a basic level with the display property, and in a different way by associating style sheets with a document. The user will never know whether this is done via an external or embedded style sheet, or even with an inline style. The real importance of external style sheets is the way in which they allow authors to put all of a site's presentation information in one place, and point all of the documents to that place. This not only makes site updates and maintenance a breeze, but it helps to save bandwidth since all of the presentation is removed from documents.

To make the most of the power of CSS, authors need to know how to associate a set of styles with the elements in a document. To fully understand how CSS can do all of this, authors need a firm grasp of the way CSS selects pieces of a document for styling, which is the subject of the next chapter.

BACK END LANGUAGES USED

➢ MYSQL

My SQL, the most popular Open Source SQL database management system, is developed, distributed, and supported by Oracle Corporation.

- **MySQL is a database management system.**

  A database is a structured collection of data. It may be anything from a simple shopping list to a picture gallery or the vast amounts of information in a corporate network. To add, access, and process data stored in a computer database, you need a database management system such as MySQL Server. Since computers are very good at handling large amounts of data, database management systems play a central role in computing, as standalone utilities, or as parts of other applications.

- **My SQL databases are relational.**

  A relational database stores data in separate tables rather than putting all the data in one big storeroom. The database structures are organized into physical files optimized for speed. The logical model, with objects such as databases, tables, views, rows, and columns, offers a flexible programming environment. You set up rules governing the relationships between different data fields, such as one-to-one, one-to-many, unique, required or optional, and "pointers" between different tables. The database enforces these rules, so that with a well-designed database, your application never sees inconsistent, duplicate, orphan, out-of-date, or missing data.

The SQL part of “My SQL” stands for “Structured Query Language”. SQL is the most common standardized language used to access databases. Depending on your programming environment, you might enter SQL directly (for example, to generate reports), embed SQL statements into code written in another language, or use a language-specific API that hides the SQL syntax.

SQL is defined by the ANSI/ISO SQL Standard. The SQL standard has been evolving since 1986 and several versions exist. In this manual, “SQL-92” refers to the standard released in 1992, “SQL:1999” refers to the standard released in 1999, and “SQL:2003” refers to the current version of the standard. We use the phrase “the SQL standard” to mean the current version of the SQL Standard at any time.

- **My SQL software is Open Source.**

  Open Source means that it is possible for anyone to use and modify the software. Anybody can download the My SQL software from the Internet and use it without paying anything. If you wish, you may study the source code and change it to suit your needs.

- **The MySQL Database Server is very fast, reliable, scalable, and easy to use.**

  If that is what you are looking for, you should give it a try. My SQL Server can run comfortably on a desktop or laptop, alongside your other applications, web servers, and so on, requiring little or no attention. If you dedicate an entire machine to My SQL, you can adjust the settings to take advantage of all the memory, CPU power, and I/O capacity available. MySQL can also scale up to clusters of machines, networked together. My SQL Server was originally developed to handle large databases much faster than existing

solutions and has been successfully used in highly demanding production environments for several years. Although under constant development, My SQL Server today offers a rich and useful set of functions. Its connectivity, speed, and security make My SQL Server highly suited for accessing databases on the Internet.

- **My SQL Server works in client/server or embedded systems.**

  The My SQL Database Software is a client/server system that consists of a multi-threaded SQL server that supports different backend, several different client programs and libraries, administrative tools, and a wide range of application programming interfaces (APIs).

  We also provide MySQL Server as an embedded multi-threaded library that you can link into your application to get a smaller, faster, easier-to-manage standalone product.

- **A large amount of contributed MySQL software is available.**

  MySQL Server has a practical set of features developed in close cooperation with our users. It is very likely that your favorite application or language supports the MySQL Database Server.

FEASIBILITY STUDY

Title: Feasibility report for the computerization of the various activities of the company.

Background:

The Company facing the problem of inconsistent and out of time information in its activities. Very much time is consuming for report generation, which is not very helpful for decision making. So we want a system, which provide immediate information.

Method of study:

The analysis procedure comprised of field trips in the various departments of the company. The following documents and sources Were looked up: The purchase order that contain items to be purchased. The accounts register. Purchase order issues to vendors.

Bills receive from vendors.

Bills give to the customers.

Purchase return forms (if any) give to vendors.

NEED FOR FEASIBILITY STUDY:

The feasibility study is carried out to test whether the proposed system is worth being implemented. Feasibility study is a test of system proposed regarding its work ability, its impact on the organization ability to meet user needs and effective use of resources. It is usually carried out by a small number of people who are familiar with the information system techniques, understand the part of the business or organization that will be involved or effected by the project and are skilled in the system analysis and design process.

The key consideration involve in the feasibility study are:

1. Technical
2. Behavioral
3. Economic

1.TECHNICAL FEASIBILITY

Technical feasibility centers on the existing computer system (hardware, software etc) and to what extent it can support the proposed system addition. For example, if the current system is operating at 70% capacity (an arbitrary value), then another application could overload the system or require additional hardware. If the budget is serious constrain then the project is judged not feasible.

2.BEHAVIOURAL FEASIBILITY:

An evaluation of the behavior of the end users, which may affect theEnvelopment of the system. People are inherently resistant to change and computers have to know to facilitate changes and computers have to known

to facilitate changes. An estimate should be made of how strong a reaction the user staff is likely to have towards the development of a computerized system. It is a common knowledge that a computer installation has something to do with turnover, transfer, retraining and changes in employee job status, therefore the introduction of a candidate system requires special effort to educate, sell and train the staff on new ways of conducting business.
The personal of the user organization will be affected by the proposed system. As the aim of the system is only to satisfy the information needs, no employees will loose their position by the proposed system. In fact the proposed system will help the organization in reducing the voluminous work involved. Also the involvement of users in every stage of the project is going to increase the success factor.

The staff in not well educated for running a computerized system. They are adamant in perceiving a mechanical process of working as they have long been used to the manual entry system. This aspect needs considerable amount of attention.
Our system is also feasible for organization because it supports of theorganization and its strategic plan.

3.ECONOMIC FEASIBILITY:

The procedure is to determine the benefits and savings that are expected from a candidate system and compare it with the costs. If a benefit outweighs costs, then the decision is made to design and implement the system.

Otherwise further alterations are made in the proposed system
1. Manpower cost
2. Hardware and software cost

SOFTWARE TESTING

Testing is a very critical aspect of the Software Quality Assurance (SQA) and represents the ultimate review of specification, design and code generation .The design process focuses on the logical internals of the software, ensuring that all the statements have been tested and all the functional externals i.e. defined input will produce actual results that agree with the required results.

There are two types of testing
1. WHITE BOX TESTING
2. BLACK BOX TESTING

WHITE BOX TESTING:

It is also called as glass-box testing. It is predicted on the close examination of the procedural details. Here providing test cases that exercise specific sets of condition and for loops tests the logical paths through the software. It demonstrate that each function operational at the same searching for errors in each function.

BLACK BOX TESTING:

This is also called as the behavioural testing and it focuses on the functional requirements of the software. It enables the software engineer to derive set of input conditions that will fully exercise all functional requirements for a program. These sets are used to demonstrate that software functions are operational and output is correctly produced and integrity of external database is maintained. It helps to ensure that the internal operations are performed according to specification and all components have been adequately exercised.

TESTING IN OUR SYSTEM

When our system will be fully operational we will perform the following types of tests:

1. INTEGRATION TESTING
2. VALIDATION TESTING

Moreover the user will be asked to used this system in parallel with their existing system and notify the end user of any exceptions and errors that they experiences. The rectification of all these will be the developer's responsibility.

Just now we are implementing the incremental integrated testing, where the programs are constructed and tested in small increments that facilitate the easier detection of the errors, isolation and correction.

VALIDATIONS

No record can be saved till all the necessary entries are done. Only administrator can perform sophisticated tasks like printing of Reports, Register new member and/or delete an existing member etc.
For security purposes the E-mail of user is required in case he/she forgets his/her password and wants to retrieve that.

FUTURE SCOPE AND FURTHER ENHANCEMENT OF THE PROJECT

FUTURE SCOPE

It has been a great experience implementing this project. This project title as "**E-MEDICINE** " will be a great aid to general public and shopping administration. This project will reduce the work load of and will increase the efficiency.

This website will provide facilities such as cash on delivery, enables user to access there product details, management of medicine records by the shopping administration. Admin has the rights To see that how many customers are buying products every day and also check the total daily transactions.

Some other features that helps it in gaining people interest are as follows:-

- The entry of this project will bring a boom in market as it is based on completely new concept .
- Interactive user interface will make it usage interesting.

This project will be a revolution in the private sector. The working of the e- medicine will be enhanced and better results will be obtained. The main thing is that it will provide satisfaction to the customer as now he can access his/her entire bill details and pay bill at one place. There is no chance of any kind of cheat. Thus this project has a great future.

Some other beneficiary features are:-

1. This project will reduce the paper work and hence nature friendly.
2. Interactive user interface will make its usage interesting.
3. Will reduce the manual load, hence less employees will be required in the accounts section.
4. Accurate calculations and results.
5. Time efficient.

6. The E medicine system enables vendors to set up online shops for medicine, and also helps customers to buy medicine online , and a system administrator to approve and reject requests for new medicial store and maintain lists of store categories

Further Enhancement of the Project:-

Everything that is made has some or the other things to be added to make it better than revolutions.

The project "E-medicine", it has been tried to develop a robust and fault free system, still enough flexibility has been provided for further enhancements and modifications. As I mentioned earlier then the designed forms are typically reflections of the developer, so I strongly believe that the enhancement to be done with the project to be done with the design changes, coding changes. But at the same time I would like to mention that since one cannot claim himself as a master of the technology there is always some scope of technical modifications in the project that may lead to find code redundancy & storage space minimization.

Since the data is retrieved from the tables where everything is based on the coding system if the coding system is changed then the system needs to be redesigned.

LIMITATION OF THE PROJECT AND SECURITIES MEASURE

Problems with conventional system

- **Lack of immediate retrievals: -**The information is very difficult to retrieve and to find particular information like- E.g. - To find out about the order's history, the user has to go through various registers. This results in inconvenience and wastage of time.
- **Lack of immediate information storage: -** The information generated by various transactions takes time and efforts to be stored at right place.
- **Lack of efficient billing: -** User have to add bill each time.
- **Preparation of accurate and prompt : -** This becomes a difficult task as information is difficult to collect from various registers.

.

Hence, there is a need of reformation of the system with more advantages and flexibility. The Online medicine shopping System eliminates most of the limitations of the existing software. It has the following objectives:

- **Enhancement:**

The main objective of Online Hospital Management System is to enhance and upgrade the existing system by increasing its efficiency and effectiveness. The software improves the working methods by replacing the existing manual system with the computer-based system.

- **Automation:**

The Online medicine buying System automates each and every activity of the manual system and increases its throughput. Thus the response time of the system is very less and it works very fast.

- **Accuracy:**

The Online medicine buying System provides the uses a quick response with very accurate information regarding the users etc. Any details or system in an accurate manner, as and when required.

- **User-Friendly:**

The software Online medicine buying has a very user-friendly interface. Thus the users will feel very easy to work on it. The software provides accuracy along with a pleasant interface.Make the present manual system more interactive, speedy and user friendly.
